

## 1. Performance Dashboards and Balanced Scorecards

For Asian Institute of Technology (AIT), you are requested to suggest how dashboards and BSC can be used as performance measurement for the Institute. Please also sketch an executive dashboard for AIT President.

*You can make any assumptions as needed.*

2. Choose to answer only **ONE reading** from the following *four* readings.  
Make sure that it is not your reading presentation.

**Reading A:** Decision-making techniques in supplier selection: Recent accomplishments and what lies ahead

- Based on summarization of data mining techniques, describe four aspects that can make the problem-solving process more complicated.

**Reading B:** A data mining based system for credit-card fraud detection in e-tail

- Explain how a risk scoring system estimates a fraud suspicion score for each order.

**Reading C:** A reference model for business intelligence to predict bankruptcy

- Discuss how Reference Model for Business Intelligence to Predict Bankruptcy (RMBIPB) is developed. What are three layers of this model?

**Reading D:** A text analytics approach for online retailing service improvement:  
Evidence from Twitter

- Describe how text analytics is used to identify the customers' primary topics of concern regarding online retail brands that are shared among Twitter users. What are major techniques used to analyze Twitter data and identify customer's major concern.
